

## **Email update # 17. (2024-6-10)**

Dear Humanity Projects subscribers,

We hope you are all doing well. We are pleased that our research is reaching more and more people and having a significant impact on changing the prevailing pandemic narrative. Thank you all for following, sharing, and to our volunteer researchers for taking time from their personal lives to help this project.

Below is an update on our latest research activities this year.

### **1 - Latest research updates:**

#### ***A – US neurological death trends, all ages and detailed analysis of age group 15-44.***

This analysis, published on Research Gate, is increased neurological death rates for younger individuals (aged 15-44) in the US, in 2021, 2022 and 2023, which corroborates our previous analysis of Neurological deaths in the UK, by Bess Dalby.

<https://phinancetechnologies.com/HumanityProjects/US%20CDC%20Cause%20of%20death%20Project%20-%20Neurological%20Deaths%2015-44.htm>

#### ***B – COVID-19 over-reporting as underlying cause of death during the pandemic.***

This is another important analysis as it attempts to estimate the degree by which COVID-19 was over reported during the pandemic years, as underlying cause of death. This work is relevant as when investigating other causes of deaths, one needs to invariably investigate the degree to which those deaths are impacted by COVID-19. Our paper is a step in the direction of better understanding death rates during the pandemic.

### **2 – research papers/reports on which we are currently working:**

- Cardiovascular deaths in the US during the pandemic.
- Trends in deaths from or with Renal Failure.
- Trends in deaths related to the Digestive System.
- VAERS reports for specific causes.

Thank you for your continued support. Your donations and support allow us to maintain and expand our research as well as provides us energy to continue in this enormous task.

Wishing you all the continuation of a great 2024,

The Humanity projects team
