

Dear Humanity Projects subscribers,

Below you'll find our latest updates. This is an important one as we establish what we consider to be strong evidence for causality between the vaccine and the rise in disabilities.

Email update # 6. (2022-2-14)

We performed the following updates to our website:

1 - Release of the Analysis of Serious Adverse Events from mRNA vaccine clinical trials papers.

Last year a new article was published in the journal Vaccine that re-examined the safety data from the mRNA clinical trials, and in particular the rates of serious adverse events (which are only those side effects that result in disability). The researchers found that when they removed Covid-19 itself as an adverse event, they found there was a combined 16% increased risk of SAEs in the vaccinated group compared to placebo. We used the data from this new group's analysis to run a simulation of what we'd predict the SAE rate would be given the monthly US vaccination data over time, and compared that to the actual increase we saw in disability rates among the Civilian Labor Force in that same time frame.

This analysis points further in the direction of **causation** between the Covid-19 vaccine rollout and the rise in disabilities since early 2021.

Paper Review:

<https://www.phinancetechnologies.com/HumanityProjects/SAE%20mRNA%20Clinical%20Trials.htm>

Relationship with rise in disabilities:

<https://www.phinancetechnologies.com/HumanityProjects/US%20Disabilities%20-%20Part5.htm>

Issues on which we are currently working:

- VAERS data (with the collaboration of a special guest).
- VSAFE data (with the collaboration of a special guest).
- Analysis of Adverse Events (AEs) and Sev. Adverse Events (Sev AEs) from the original papers on the mRNA clinical trials.

Thank you for your support. Wishing you all a great day,

The Humanity projects team.
