Humanity Projects

How we see the world today

We live in a world where regulatory institutions are captured by financial and political interests, either unwilling or unable to get to the truth of the issues they set out to investigate and regulate on behalf of the individuals in society. Without unbiased and comprehensive research, there is a risk of misguided policy decisions at best, and at worst, negligence and malpractice. Never has this been more apparent than during the Covid-19 pandemic.

In this context, we need independent agents to act as gatekeepers of the public interest.

We intend to be such agents, and to provide high-quality research to other individuals and institutions who seek similar outcomes.

What we believe in

Empowering individuals with the tools for decision-making, when the regulatory institutions set up to protect them can no longer be trusted with the important decisions that affect their lives.

Asking the tough questions. Undertaking research with an open mind and unhindered by political and economic pressure.

Speaking the truth, even though many times this will mean saying, "We don't know."

### We work by applying the principles of scientific rigor. This means:

We ask questions, collect and analyze data, use this feedback to ask new questions, and refine our answers accordingly as we approach a greater understanding of the truth.

We identify and openly acknowledge possible biases in our work so that these can be challenged and addressed by others working in the same field of enquiry.

We identify conflicts of interest (emotional and financial) and try to mitigate for these. Sometimes this will mean acknowledging that we are not the best people to do a particular piece of research.

Our aim is to provide a knowledge portal for individuals worldwide to enable them to answer questions on different societal issues.

SUPPORT OUR WORK

In "normal" times, projects such as these should be managed by regulatory agencies or academic institutions. However, funding conflicts of interest have led to regulatory capture.

As things stand, we need your support to expand our projects and maintain our current ones. We make it an essential priority to have independent sources of funding, as well as maximum transparency with respect to how your money is spent.
