Dear Humanity Projects subscribers,

1 - Humanity Project Update:

It has been a long time since our last update. We've been busy with expanding our team, improving our webservers and infrastructure. Additionally, we've improved our internal research project plan and management structure so that we can expand our operations going forward.

In order to build a sustainable working structure going forward, our next steps include organizing our research projects so that external sponsors will be able to sponsor individual projects. We hope freedom-oriented companies, foundations or individuals will support our efforts by sponsoring our projects.

We apologize for not being able to respond to all who contacted us via our emails. We are a small team that focuses on research and so the emails we're receiving are overwhelming. As we appreciate your feedback and interest, we are working in expanding our team to finding a solution to this issue.

2 - Latest research update:

- UK Absences analysis

In terms of research, in the context of our V-damage project for the UK, we published our UK absences analysis which corroborates for the UK our findings when analyzing the US data.

Link to the UK absences analysis:
https://phinancetechnologies.com/HumanityProjects/UK%20Absence%20rates.htm

3 - Research that will be released soon:

We believe that coming research will have an impact on making clear the damage which we relate to the Covid-19 inoculations. Stay tunned for the following releases of research:

- UK disability analysis (PIP claims)
- UK NHS absence rates from sickness analysis.

4- Issues on which we are currently working:

- VAERS data (with the collaboration of a special guest).
- V-Damage project for the UK.

Thank you for your continued support. Your donations and support allow us to maintain and expand our research as well as provides us energy to continue in this enormous task.

Wishing you all a great day,

The Humanity projects team
